

MAGNETIC BRACKET

Strong magnetic mounting bracket

ORIGINAL
SCANGRIP

SINCE 1906

Compact and very powerful magnetic bracket designed for flexible mounting and positioning of work lights on any magnetic surface.

The magnet is extremely powerful with a holding force of 21.5 kg or 210N. The magnet is rubber-coated to protect and avoid scratching the surface. To obtain maximum flexibility the magnet is turnable and can be rotated to any desirable position. So, even where the magnetic surface available is limited, the flexible mounting bracket can be used.

The simple and one-hand-operated mounting bracket ensures fast and secure installation, and the lamp can be tilted to any position required in the daily work. A built-in stop mechanism avoids the lamp from falling out of the bracket. Press the button to release.

For the large work lights, we recommend using MAGNETIC BRACKET LARGE item no. 03.5391 with double holding force.

The MAGNETIC BRACKET is designed to fit a wide range of SCANGRIP work lights. See complete list on scangrip.com.
